SUMMARY

Mid-Level Backend .NET Developer with 4+ years of experience building mission-critical systems for the healthcare sector (healthtech). Since 2024, I've worked on the care-protocol authorization platform at Hapvida NotreDame Intermédica — a rules engine that orchestrates the authorization and execution of hospital medical protocols (around 15 treatment types), built on a distributed architecture with C#, ASP.NET Core, microservices, CQRS, Dapper, and SQL Server. In parallel, I build and use agentic AI tools (Claude Code) to accelerate day-to-day software engineering. Open to remote opportunities in healthtech or distributed-architecture products.

PROFESSIONAL EXPERIENCE

Mid-Level Backend Software Developer | .NET

Feb 2025 – Present · 1 yr 6 mos · Remote

Hapvida NotreDame Intermédica

- Designed and implemented the conditional-logic engine for the protocol builder (a decision tree with branching between protocol steps) — today, **100% of the platform's active care protocols** run on this engine.
- Built the item-selection feature for simultaneously executed protocols, avoiding duplicate prescription submissions — covering 7 treatment types (medications, medical opinion, procedures, physical/speech therapy, imaging and lab exams).
- Developed support for special procedures and materials (OPME) in the care-protocol engine, expanding the range of treatment types the platform supports.
- Delivered the hospital discharge prescription feature end-to-end, implementing it simultaneously across all 3 services in the architecture (BFF, protocol engine, and legacy-data integration).
- Restructured the distributed caching strategy (Redis) for patient data, **cutting the exam-listing endpoint's response time from ~15s to ~3s (~80% faster)**.
- Use Claude Code and agentic AI tools in day-to-day work — production bug debugging, AI-assisted log analysis, and custom skills to speed up recurring tasks across the platform's microservices ecosystem.

Mid-Level Backend Software Developer | .NET

Aug 2024 – Feb 2025 · 7 mos · Remote

5by5 | Soluções em Sistemas (staffed on the Hapvida NotreDame Intermédica account)

- Actively participated in the initial development of microservices, from architecture definition to implementation.
- Backend development in C#/.NET of the core inpatient-protocol logic, dynamically orchestrating protocol flows.
- Developed a microservice using the Anti-Corruption Layer (ACL) pattern to integrate and isolate the Oracle database, ensuring decoupling and data governance.
- Applied the CQRS pattern for scalability and code maintainability, collaborating with agile teams.

Fullstack Software Developer | .NET · TypeScript · React

Feb 2023 – Aug 2024 · 1 yr 7 mos · Hybrid

ValorUp Tech

- Led the Nexxus squad within the company's innovation team, working with Agile/Scrum methodology.
- Built integrations with generative AI APIs (OpenAI/DALL-E), Amazon, and PayPal.
- Worked in fullstack development with .NET, TypeScript, and React, including direct client engagement.

Backend Software Developer | .NET · VB.NET

Oct 2021 – Feb 2023 · 1 yr 5 mos

OuroWeb · Ribeirão Preto, SP

- Led a software development squad.
- Implemented integrations with the AlcisWMS warehouse management system.
- Worked with Agile/Scrum methodology and ERP customizations.

TECHNICAL SKILLS

Languages & Frameworks: C#, .NET / .NET Core, ASP.NET Core, TypeScript, JavaScript

Architecture & Data: Microservices, CQRS, Anti-Corruption Layer (ACL), Entity Framework, Dapper (ORM), Refit, SQL Server, Oracle, Redis

Messaging & Realtime: RabbitMQ, SignalR

DevOps & Tools: Docker, Kubernetes, Azure DevOps, GitHub, Jenkins

Frontend: React, Angular

AI & Automation: Claude Code, Agentic AI / Agent Engineering

Methodologies: Scrum

EDUCATION

B.A. in Computer Science — Estácio	Feb 2020 – Jun 2026 (in progress)
------------------------------------	-----------------------------------

CERTIFICATIONS

Foundational C# with Microsoft — freeCodeCamp	Jun 2024
Cisco Cybersecurity Essentials — Cisco	May 2020
